

ABSTRACT OF THE DISCLOSURE

A fish net, comprising a frame, and a net, attached to the frame, and including a length 5 measuring scale disposed on the net, configured to allow a user to determine a size of a fish held in the net by visually comparing the fish with the length measuring scale. In one embodiment the length markings include a zero point near the bottom of the 10 net, with two coordinated scales sharing the zero point and extending in opposing directions therefrom, such that a user may visually determine the length of the fish by aligning the fish with the length scale, and adding the numeral designations which are aligned 15 with opposing ends of the fish.
